Quantum Coherence Correlation And Decoherence In Semiconductor...

Quantum coherence represents a universal property of the quantum s- tems that applies both to light and matter thereby tying together materials and p- nomena.

Quantum Coherence Correlation and Decoherence in Semiconductor Nanostructures on Apple Books

Semiconductor nanostructures are attracting a great deal of interest as the most promising device with which to implement quantum information processing and quantum computing. This is a key operation in the quantum state manipulation and has been achieved successfully by several groups.

If you decide to participate, a new browser tab will open so you can complete the survey after you have completed your visit to this website. This book surveys the present status of nanofabrication techniques, near field spectroscopy and microscopy to assist the fabricated nanostructures. The discrete energy level structures owing to the three-dimensional confinement is favorable to realize an ideal two-level system, namely, the ground state and an excited state, whose superposition states can be manipulated by optical means.
