16.4 Glacial Deposition

There has been little disturbance by roots at the site, and there is no evidence that large tree roots or tree falls have disturbed the deposits. Hammer 1978, 1986 and Last 1984a summarize the short-term temporal changes in salinity and chemistry of several other saline lakes in the region. These specimens are from the same raw material, have a high frequency of cortex, and are much larger than other debitage.

10. fluvio-glacial landforms

Dick Gilbert is the only person who has participated in every excavation at the site, and was responsible for encouraging Fladmark to return to the site in 1983 and Driver in 1990.

Glacier

Geochemical evolution of closed basin water in the western Great Basin.

The Reflection of Abrupt Climatic Changes in the Relief and Sequence of Continental Deposits

The meltwater makes the bottom of the heavy glacier slicker and more able to spread across the.

List of lakes of Alberta

The history of the glacial period is recorded by the topographic features of the region as well as by the composition and structure of the glacial drift. .
