## Fundamental Consideration

OBJECTS OF THE INVENTION It is an object of the present invention to provide a wall in a building that, as installed, can achieve specific design loads for resisting lateral forces on the wall. One of the earliest methods for bracing a wall against lateral forces was to incorporate bracing into the frame of the wall in the form of diagonal bracing members.

**Commonwealth Education Trust**

Rayco Earthquake Mitigation Anchor System. Laboratory on a machine designed to simulate their behavior when inserted in a wall during the cyclic reversing lateral forces that would occur during an earthquake.
