A Possible Protective Effect of Nut Consumption on Risk of Coronary Heart Disease: The Adventist Health Study

Some of these chemicals can be toxic to humans when consumed in large amounts. Uptake of zinc from plant sources can be lower as a result of the presence of anti-nutrients such as phytates, lectins, and certain fibers ;. American Journal of Clinical Nutrition 100:1541—1550.

Antioxidant Activity of Grains

While all forms of vitamin B 12—naturally occurring adenosylcobalamin and hydroxycobalamin and the man-made form cyanocobalamin—are absorbed with similar efficiency , a potential concern with meeting B 12 requirements through cyanocobalamin is that its tissue retention rates, and subsequent metabolic activity, are reduced compared to naturally occurring forms of B 12 ; ; ;.

Winged bean (Psophocarpus tetragonolobus (L.) DC.) for food and nutritional security: synthesis of past research and future direction

Statement of the Scientific Panel on Genetically Modified Organisms on the Analysis of Data from a 90-day Rat Feeding Study with MON 863 Maize. Effects of Solid-State Yeast Treatment on the Antioxidant Properties and Protein and Fiber Compositions of Common Hard Wheat Bran.

A Possible Protective Effect of Nut Consumption on Risk of Coronary Heart Disease: The Adventist Health Study

In the developed world, health benefits of whole grain consumption have been extensively documented, particularly in the past 10 years.
