They also may, after sterilisation, be used for certain types of irrigation such as golf courses , transported to lagoons where they are evaporated, or discharged through underground outfalls into the sea. ### Brief Introduction About Waste Water Treatment Plants

Studies of United States sewage in the late 1960s estimated mean per capita contributions of 500 grams 18 oz in urine and feces, 1,000 grams 35 oz in synthetic detergents, and lesser variable amounts used as corrosion and scale control chemicals in water supplies. A study found high nutrient concentrations linked to sewage effluents. If it is sufficiently clean, it can also be used for groundwater recharge or agricultural purposes.
