### 25 cool facts about bugs!

Here at National Geographic Kids, we love bugs! They close horizontally and are used for grasping food and crushing it.

### 7 facts about insects

There are lots of exciting things you can find if you go on a bug safari in your garden! Compound eyes are made up of dozens of lenses.

### 7 facts about insects

There may be as many as 10 million species of insects alive on earth today, and they probably constitute more than 90 percent all animal species. Young cicadas eat liquid from plant roots, while molting cicadas eat twigs.

### 5 Facts About the Skeletonizer Insect

A mosquito flaps its wings 500 times a second. They do bleed when they are hurt, and their blood can clot so they can recover from minor wounds. Found in Argentina in 2000, the ginormous colony housed 33 ant populations which had merged into one giant supercolony, with millions of nests and billions of workers! New species of insects are continually being found.

### 20 Startling Facts About Insects

The exoskeleton at the joints does not become sclerotized and therefore remains flexible. You might think of them as docile things, moving about slowly, nibbling on orchids.

### Insect Facts for Kids

Their eggs or young survive in sheltered places and emerge in spring. The ocelli don't provide the insect with sophisticated images of its

environment, but simply help it detect changes in light. Did you know that we have a FREE downloadable? Q: Why do insects like light? The forms of the legs vary, depending on their uses, but all insect legs are made up of five parts.
