These results indicate that marine pollution certainly does have a negative effect on the sperm count and fertility of the animals that are exposed to it. These parameters can potentially be predicted in real-time from others whose values are available instantaneously. Another serious pollution problem stems from the use of artificial radioactivity for the development and testing of nuclear weapons as well as for the production of electrical power.

If the storm water regulations are rewritten to allow for BMPs, then the state of commercial and non-commercial water sources could be greatly improved. The traditional approach to water quality monitoring is slow, tedious, expensive and prone to human error; it only allows for the testing of a limited number of samples owing to a lack of infrastructure and resources.
