The Unified Field and the Quantum Nature of Consciousness

In the 1960s, I became aware of two startling predictions: A foreign graduate student in theoretical physics, a Chinese National, inadvertently revealed to me during a private philosophical discussion, a secret hidden in plain sight. So, if thinking implies existence as a conscious being, as Descartes claimed, then we need to ask: exactly what is thinking, and does it imply consciousness? Bohr and Heisenberg argued that the conclusion of the EPR thought experiment was wrong because it was based on the unwarranted assumption of the physical continuity of the particles that were observed at the beginning and end of the experiment. There would be no one to say it.

Consciousness is the Unified Field

This is the predefined phenomenal structural, i. The fact that computers can be programmed to appear to talk with you, like, e. And field effects of consciousness—i.

How phenomenology can help us learn from the experiences of others

The addition of negative numbers to form the integers results in a system that is closed under subtraction—i. The softness of speech gives an expression to the culture of the heart, and the logic, imagination, or creativity expressed through the speech reveals the culture of his mind.

Kantâ€™s Transcendental Arguments (Stanford Encyclopedia of Philosophy)

Second, consider the claim that my mental states or the mental subject itself are as suited as objects in space to function as a reference whereby I can correctly judge the temporal order of my past experiences. A logical system defined by a finite number of basic symbols, axioms, and rules is consistent when statements constructed from the basic symbols used in the axioms and rules do not contradict any of the axioms. The answer may be surprisingly straightforward — alien life has evolved in an alternate conscious observer space-time, i.

How phenomenology can help us learn from the experiences of others

By analogy, the smelting and molding of steel are processes that constitute or produce steel girders, but from this one should not conclude that the processes of smelting and molding steel cannot take place without the production of steel girders. Obviously, the success of the proofs depends on the legitimacy of the exclusive disjunction agreed to by both parties. Association is the process by which these perceptions are related and ordered.
