Applications of Geochemistry to Medical Geology

Many thanks to others who helped me out in this work, but who would rather not have their names recorded, especially for the inhabitants of Mai-Hanse Area for their hospitality, insights, and participation in the research. Trace Elements and Fibrosis Fibrosis of various organs and tissue have been studied, but only very few studies correlate the trace elements and fibrosis. Since some tributaries of seasonal streams have had no water flow for many months, the stream bed was covered by fallen bank materials.

The soil in which these experiments were performed originally contained only 65 ppb of extractable chromium, and this amount had been further depleted by subsequent crops. Geological Society of America, Boulder, Colo. The decrease of zinc and iron content may be attributed or secondary to an increase of copper levels.
