### Waste management

The licensee shall conduct storage activities in accordance with its documented procedures. The licensee should perform all construction activities so that containment and isolation features of the host environment are preserved.

### Waste management

In addition to tailings, mining activities typically result in the production of large quantities of waste rock as workings are excavated to access the ore body. Selvadurai received the Inaugural Horst Leipholtz Medal of the Canadian Society of Civil Engineering and in 1993 the Engineering Medal for Research and Development of The Professional Engineers of Ontario.

### Thermal Behaviour of Backfill Material for a Nuclear Fuel Waste Disposal Vault

Martin was also Senior Advisor to the Director of the Canadian Nuclear Fuel Waste Management Program, as well as head of the Geotechnical Research Section of Atomic Energy of Canada Limited's AECL Whiteshell Underground Research Laboratory. Upon the completion of commissioning, the licensee shall produce a final commissioning report. We offer a wide range of optional internship and co-op programs to help you gain valuable, relevant work experience to promote networking and lifelong career success.

### Nuclear Engineering

The licensee shall, as far as practicable, minimize the generation of radioactive waste.
