U.S. Geological Survey Information Sources

DTS is a promising tool for identifying spatial and temporal temperature patterns of hydroecological importance amidst complex natural systems.

resources/usgs

Vector-borne and zoonotic diseases, water contamination, airborne contaminants, bioaccumulative contaminants in the food chain, and environmental threats to public health the world over require marshalling of all our scientific knowledge and know-how to develop new solutions.

Influence of niche breadth and position on the historical biogeography of seafaring scincid lizards

Transport through the unsaturated zone may enhance, impede, or simply delay movement of the contaminant to the water table. The DRASTIC method has been used to produce maps in many parts of the United States, and in Israel, Nicaragua, Portugal, South Africa, and South Korea. Pumping a well can reverse flow directions causing natural discharge areas to become sources of recharge to the well.

EVALUATION OF THE MRSP PLAN AND RECOMMENDATIONS FOR SUBPROGRAMS

The panel recognizes that the transfer of the USBM minerals information function to the USGS occurred after the MRSP Plan was drafted.

Steven Gorelick's Profile

The Geochemical System The addition of contaminant-specific information to an assessment of intrinsic susceptibility is required in order to develop a complete ground-water-vulnerability assessment. Although there is some evidence that natural variability is influencing the sea ice decrease, Stroeve et al.

The 7th International CO2 Conference Web Site

For best results viewing and printing PDF documents, it is recommended that you download the documents to your computer and open them with Adobe Reader.

EVALUATION OF THE MRSP PLAN AND RECOMMENDATIONS FOR SUBPROGRAMS

Anomalous bed temperatures of 2-4 degrees C occurred throughout the 1.
