**Hyten wants a greater 'focus' with cruise missile defense**

Since then, their use has grown

dramatically in land-attack in ground-, sea-, and air-launched modes, reconnaissance, as targets, and even in some civilian applications such as pipeline inspection and crop-dusting.

## Threat Under the Radar: The Case for Cruise Missile Control in the Next National Security Strategy

Consider, for example, the dire and unfavorable cost-exchange arithmetic associated with current U. She won the National Press Club's best analytical reporting award in 2014 and was named the Defense Media Awards' best young defense journalist in 2018. Lethal Military Equipment LME sanctions contained in annual Foreign Relations Authorization Acts and in the Foreign Assistance Act require sanctions against governments that provide LME which would include cruise missiles to countries on the U.

When these, in large numbers, are combined with more expensive and sophisticated ballistic and cruise missiles, they raise the stakes enormously for American missile defenses. The proliferation of cruise missiles also poses challenges to inter-state relations, especially in strained regional contexts. Due to the inability of current-generation missile defense systems to defend effectively against incoming cruise missile strikes, such weapons may prove an effective tool for terrorist groups to overcome perimeter defenses and cause significant damage.

## Addressing the Spread of Cruise Missiles and Unmanned Air Vehicles (UAVs)

It argues that, because the unfolding pattern of the threat remains so unclear, more must be done now to develop and implement hedging strategies to dissuade adversaries from acquiring cruise missiles or to delay the threat's emergence. Such slow speeds actually furnish an advantage as many of our sophisticated lookdown airborne and ground-based air defense radars eliminate slow-moving target on or near the ground to prevent their data processing and display systems from becoming overtaxed. In addition, states possessing long-range cruise missile systems should clarify their doctrinal use and purpose for deploying these systems.

### **Addressing the Spread of Cruise Missiles and Unmanned Air Vehicles (UAVs)**

India will likely join this club once it completes development of its Nirbhay cruise missile. Issuing its report in March 2004, the GAO found that while multilateral export control regimes have expanded their lists of controlled technologies, key countries of concern e. Cruise missiles in particular are astonishingly absent from the debate.
