## 9 Rainforest Facts Everyone Should Know

The Idiot Fruit *idiospermum australiense* is one of these primitive species, one of the most ancient and rare flowering plants on earth. Within the 's biome classification, tropical rainforests are a type of or tropical wet forest that also includes the more extensive.

### rainforest

Fact 36: In a 2017 analysis published in the scientific journal PNAS, climate scientists concluded that , natural climate solutions and sustainable agriculture could provide more than one-third of the global climate mitigation required to stabilize warming to below 2 °C. Foliage on the tree trunks tends to be minimal and thin but spread wide as the trees reach their sunny upper layer, where they can properly absorb nutrition from the light of the sun. The total rainfall in these regions can range all the way from 80 to 400 inches in a given year, an absolutely towering amount that explains why these rainforests are so aptly named.

## 17 Biggest and Popular Rainforests in the World That Might Surprise You

Tropical rainforests are located near the equator, between the Tropic of Cancer at 23. Thousands of indigenous tribes that have lived in the rainforests of the world have been literally run out by deforestation and the expansion of agriculture.

### rainforest

Also, continued harvesting of tropical rainforests in many countries is progressing at a rate that far surpasses that at which successful recovery projects are developed. More tropical rainforest has been destroyed in Brazil than in any other country, yet its intact forests account for nearly 40 percent of the tropical rainforest habitat worldwide. The physical properties of soil control the tree turnover rates whereas chemical properties such as available nitrogen and phosphorus control forest growth rates.

## 9 Rainforest Facts Everyone Should Know

A medley of rivers, forests, savannah, swamp and flooded woodland, the basin teems with life: gorillas, elephants and buffaloes all call the region home. Typically, rainforests are lush, humid, hot stretches of land covered in tall, broadleaf evergreen trees, usually found around the equator.

## **What are Rainforests, Importance of Rainforests and Reasons For Their Loss and Destruction**

According to , a 4-square-mile 2,560 acres area of rainforest contains as many as 1,500 flowering plants, 750 species of trees, 400 species of birds and 150 species of butterflies. Trees in this layer feature glossy leaves with sharp tips that repel water. People such as the of the , utilize agriculture to overcome these limitations and enable them to push deep into what were previously rainforest environments.
