Engineering Mechanics: Statics

Repeat the experiment twice more by varying the load in the slider block. V The center of gravity of the lamina will be the point where these two plumb line intersect. As the second realm, ordinary objects on Earth down to microscopic size moving at speeds much lower than that of light are properly described by classical mechanics without significant corrections.

The phenomena of statics were studied by using the dynamic approach so that two trends - statics and dynamics - turned out to be inter-related

within a single science, mechanics.
