Geotechnical analysis of rock structure and fabric in the C. S. A. Mine, Cobar, New South Wales (Book)

All the nephelines are mediopotassic and contain more than four Si ions per formula unit. This fact can be objectively shown by considering the variances of pdfs in Eqs.

A geotechnical analysis of rock structure and fabric in the C.S.A. Mine, Cobar, New South Wales / by...

Box 1210, Lane Cove, N. These include models of a single fracture e.

A stereological interpretation of joint trace data

The effects of the distance of the monitoring network from the contaminant source, and the number of monitoring locations installed at each monitoring well site, are investigated for each of the four monitoring strategies in each of the three fracture geometries. In contrast there are more rapid east-west facies changes across the Molong High Fig.

Hydrogeological decision analysis : monitoring networks for fractured geologic media

Engng. University of Minnesota, 1979c. Alternatively the collection could have been supplemented by Mr.
