The Sydney coalfield of Nova Scotia, Canada

Structural difficulties are minor as the field is only gently folded and no main faults are present.

Some Petrological Aspects Of The Harbour Coal Seam Sydney Coalfield No

The palynological assemblages of both seams indicate a middle to late Westphalian D age.

**Petrographical, palynological and geochemical analyses of the Hub and Harbour seams, Sydney Coalfield, Nova Scotia, Canada—
implications for facies development**

Download or read online Transactions of the Canadian Institute of Mining and Metallurgy and the Mining Society of Nova Scotia written by Canadian Institute of Mining and Metallurgy, published by Unknown which was released on 1965.

Petrography and depositional environment of coal seams in the Carboniferous Morien Group, Sydney Coalfield, Nova Scotia

Peter Albertus , 1918- eng 2 by Hacquebard, P. Download or read online Some Petrological Aspects of the Harbour Coal Seam Sydney Coalfield Nova Scotia written by A.

A Depositional Study of the Harbour Seam Sydney Coalfield Nova Scotia written by P. Peter Albertus , 1918- eng 1 by Hacquebard, P.

OCLC Classify

On the discovery of microfossils, spores, acritarchs, chitinozoans , in the Devonian of the southeastern Armorican Massive Synclinorium of Saint-Julien-de-Vouvantes and Ancenis. Bench channel samples and continuous block samples of the Hub and Harbour seams from the Sydney Basin, Nova Scotia were studied to define the variations in petrography, geochemistry and palynology of the seams and to interpret the depositional environments of the precursor mires. The geochemistry is marked by much higher H_i values than normally reported for coals but other indices are typical for coals of this rank.

The Sydney coalfield of Nova Scotia, Canada

Addition to the synopsis of the spores in situ. . Palynological studies of Carboniferous studies in borehole Mj-1 by Zdetina, Bentatic near Jizerou.
