Biological Influences On Hydrogen Effects In Steel In Seawater

Contributions of abiotic and biotic dechlorination following carboxymethyl cellulose stabilized nanoscale zero valent iron injection Environ.

The risk management of high

The Ti-stabilized alloy exhibits a better pitting resistance than the Nb-stabilized alloys. Due to its low temperatures, the cold spray process is an alternative method for spraying nanostructured materials as there is no particle melting and all the nanostructure is kept intact during the process Ref.

Hydrogen permeation through welded joints of S690QL steels at cathodic polarisation in sea water in the presence of SRB

Design and characterization of sulfide-modified nanoscale zerovalent iron for cadmium II removal from aqueous solutions.

The Corrosion Performance of Metals for the Marine Environment: A Basic Guide

This section covers the recent advances in the understanding of the corrosion mechanisms operating in high-temperature coatings and the effect of alloying.
