Depending on the proportion of concentrate in the diet the ratios may shift and in exceptional cases rations with abundant starch content lactic acid may be produced in addition.

## Trends in recombinant protein use in animal production

Genomic selection has been put forward as a new breeding paradigm Meuwissen et al. In addition to the risks associated with drought, farmers are also confronted by a range of other hazards, including hail, fire, pests and diseases. Thus Congo Avenir, a partner of the South African AgriSA, acquired 80,000 hectares of farmland on 10 March 2011 further to an agreement signed with the Congolese government.

## Food security for Africa: an urgent global challenge

The increasing use of the factorial approach for predicting nutrient requirements, based on a quantitative appraisal of requirement components and the rates of nutrient utilization, will provide a means for a better adaptation of feed supply to animal performance and production objectives. Rabbit production in tropical developing countries: a review.

## Opportunities and challenges for poultry production in sub

This includes the control of ticks to prevent tick-borne diseases, prophylactic inoculations, and the treatment of illness and injury. Projections show that the growing population, increases in income levels, and changes in preferences will lead to an increased demand for food, particularly for wheat, dairy products and meat, with a slower growth in demand for maize.
