## Functional Neuroanatomy

Reproduced with modification from McDonald and Mascagni 1997 with permission. The motor circuit is composed of a corticostriatal putaminal projection, two major striatofugal projection systems giving rise to the direct and indirect pathways, and the efferent pallido—thalamo—cortical projections to close the motor loop.

## Survey Of Functional Neuroanatomy PDF Book

Drawing illustrating the terminations of labeled axons in the rat amygdala in cases with injections of the anterograde tracer PHA-L into the DLEA A1-A3 , VLEA B1-B3 , and VMEA C1-C3.

## Functional neuroanatomy of the basal ganglia

Neurons are plotted from two non-adjacent 50µm-thick sections at most levels; asterisks in the lower left corner of a pane indicate levels at which only one section was available for plotting. The pursuit of happiness is a preoccupation for many people. Templates are modified from the atlas by Paxinos and Watson 1997.

## Survey Of Functional Neuroanatomy PDF Book

Bregma levels are indicated in upper right corner for each level.
