### Fossils

However, we do occasionally have the odd interloper who will try to take advantage of our open nature.

### TXFossils

The chemical of the part produces a film that occurs on one layer of rock, while an impression of that part occurs on the other layer of the rock.

### fossil

In recent years, geologists have been able to study the subsurface of and deposits by analyzing microfossils obtained from core samples of deep borings. After a living thing died, it sank to the bottom of the sea.

### Everything Fossils...Fossil Information for Education, Collecting and Fun!

Fossils also provide the geologist a quick and easy way of assigning an age to the strata in which they occur.

### What is a Fossil?

Another kind of fossil can form after a small insect or a piece of a plant gets trapped in resin.

### Everything Fossils...Fossil Information for Education, Collecting and Fun!

In some places, such as the in northern Arizona, one can observe a great thickness of nearly horizontal representing the deposition of sediment on the seafloor over many hundreds of millions of years.

### What is a fossil?

As always, if you have any concerns a member is dishonestly trading on TFF, please privately contact anyone on. Fossils are of particular interest

to geologists as they can help determine the age of a particular rock compared to other rocks, or identify the environment in which the rock was formed.

## **Fossils**

To extract a fossil, choose the right tool for a job, such as steel probes for fragile specimens and chisels for larger rocks.
