Revised geochronology, correlation, and dinosaur stratigraphic ranges of the Santonian

James Kennedy Chapter D Middle Campanian Upper Cretaceous Ammonites from the Pecan Gap Chalk of Central and Northeastern Texas
William A. Niobrara Chalk Fort Hays Limestone Member The Fort Hays Limestone Member is 55 to 75 feet 16.

Summary of Citation

Loess-mantled cap rock of upland surface of High Plains. The west side sequence is Frontier Formation at base which is divided into Belle Fourche Member, unnamed member, and Wall Creek Member and Cody Shale with its Sage Breaks and Niobrara Members.

A palynological biozonation for the Maastrichtian Stage (Upper Cretaceous) of South Carolina, USA

As in the Hartland, the limestone beds are generally more fossiliferous than the intervening chalky-shale beds. Along northwestern flank of basin Carlile is lowermost member of four members of Cody Shale. Outcrops in area of Deer Creek to south edge of quad.

located only 6 miles south of town. A previously described hiatus encompassing Coniacian and Turonian time is not present. In more recent years, from about 1940 to date, brief summaries of Upper Cretaceous stratigraphy have accompanied a number of county reports concerned with geology and ground-water conditions within the
