

# Study of pingo-like-features detected in the Beaufort Sea

Dept. of Fisheries and Oceans, Institute of Ocean Sciences - Composition of the summer photosynthetic pico and nanoplankton communities in the Beaufort Sea assessed by T

Description: -

-

Music -- Flanders -- 500-1400 -- History and criticism

Music -- Flanders -- 16th century -- History and criticism

Counterpoint -- History.

Associations, institutions, etc. -- Ontario -- Toronto.

York Pioneers Society.

Alves, Francisco, 1898-1952 -- Discography.

Lam-rim

Tsoñ-kha-pa Blo-bzañ-grags pa, -- 1357-1419

Echo sounding.

Pingos -- Beaufort Sea.

Ocean bottom -- Beaufort Sea. Study of pingo-like-features detected in the Beaufort Sea

-

Que sais-je? -- 1172.

Contractor report series (Institute of Ocean Sciences, Patricia Bay) -- no. 80-6.

Contractor report series -- 80-6. Study of pingo-like-features detected in the Beaufort Sea

Notes: Chiefly tables.

## Arctic Freshwater Surge Caused by Rivers, Not Ice, Study Says

Although we have suggested here that UAV surveys may not be limited by the same sea state and sun glitter conditions that limit manned surveys, our results apply only to images that have been manually reviewed.

## Unmanned Aerial Vehicles (UAVs) for Surveying Marine Fauna: A Dugong Case Study

Fish and Wildlife Service, 101 12th Avenue, Box 17, Room 222, Fairbanks, Alaska 99701, U. These options will be assessed in future trials. In these cases, 29—67 L of seawater was sieved using the protocol above.

## Clathrate gun hypothesis

Environmental conditions Turbidity was expected to influence sighting rates because this variable affects the proportion of time dugongs are available to be sighted, i.

## Fish Fauna in Nearshore Waters of a Barrier Island in the Western Beaufort Sea Alaska

Marine mammal distributions in the Arctic are commonly documented using visual surveys Simpkins et al. The 2012 expedition will focus on three large gas-venting structures on the continental slope, at depths of 290 to 790 meters 950 to 2,600 feet. Although our results showed that turbidity influenced sighting rates, the direction of influence was not as expected—the estimate of the sighting rate for dugongs in deep murky waters was higher than those for either deep clear or shallow murky waters.

## Epipelagic fish community of Beaufort Sea coastal waters, Alaska.

Although qualitative, the results of this study demonstrate an association between bearded seal call activity and sea ice formation and retreat. This study demonstrates a tight coupling between the presence of vocally active bearded seals and the condition of their surrounding sea ice habitat and provides new information on the year-round vocal activity of bearded seals in the Beaufort Sea.

### **Expedition to study methane gas bubbling out of the Arctic seafloor**

For 12 samples that could not be amplified directly, we performed first a Multiple Displacement Amplification of genomic DNA. Congress in 2017 approved President Donald Trump's Tax Cuts and Jobs Act, which requires a lease sale by 2021 on the coastal plain of the Arctic National Wildlife Refuge, a major denning location for southern Beaufort Sea polar bears. Primary production of Prochlorophytes, cyanobacteria, and eukaryotic ultraphytoplankton.
