## Soil Testing and Research Laboratory

Improved forage and pulse crop weed control improves yield and market quality and thus the economy of these of producing these crops. Johnsongrass should be harvested at heading.

## Forage in Ruminant Nutrition

The finely divided lime reacts quickly with the soil so that very low pH soils can be corrected quickly. Shaw, a recent Montana alfalfa release, is consistently producing dry matter yields greater than the yields of Ladak 65. This is a hydroponic technique in which the roots are not fully submerged.

## Province of Manitoba

Whether you look at national data or at Texas data, hay production is a valuable enterprise that contributes significantly to our state and national economies. Craighead MD, Burgess WB, Clarke SA and Duffy RG 1990 Development of sunny-facing high country using different forms of sulphur fertiliser.

## Protein content and amino acid spectrum of finger millet [ *Eleusine coracana* (L.) Gaertn.] as influenced by nitrogen and sulphur fertilizers

Nutritive value is comparable to or greater than alfalfa and other legumes; however, palatability is lower and it may not be readily consumed if growth is mature. Soil test results provide guidance on the types and amounts of fertilizer and lime to apply to optimize plant growth and yield. Annual grain legumes are normally grown for grain production although some producers do use them as green manure crops.
