Eye Surgery

Your surgeon injects numbing medication into your eyelids and administers intravenous medication to help you relax.

Cataract Surgery Methods & Techniques (Compared)

Usually causes postponement of surgery. This graphic highlights the tissues removed during an evisceration.

History of Cataract Surgery

For example, your eye may be swollen and sore for a while. What you can expect Before the procedure Blepharoplasty is usually done in an outpatient setting. Research shows that trabeculectomy lowers eye pressure in 6 to 8 out of 10 people who have it.

Evisceration

Similarly, when a cataract fragment, intraocular lens, or other foreign body dislocates and falls back into the vitreous, a vitrectomy is performed to fully free the object, which can then be removed or repositioned. The motility with and without a prosthesis is also very similar between the two surgeries Video 1.

History of Cataract Surgery

Am J Ophthalmol 1953;36: 1255—1258. However, an excess of sedation may lead to restlessness, sleeping, snoring, or respiratory depression, which, in the absence of any airway access, pose a significant intraoperative challenge.
