Heinrich Walter

Ellipsoid volume and ellipse area were calculated to estimate crown volume and crown projection area, respectively. Acknowledgments This work was funded by the NASA Precipitation Measuring Mission. Citation: Journal of Applied Meteorology and Climatology 50, 12; b.

diagwl: Walter & Lieth climatic diagram in climatol: Climate Tools (Series Homogenization and Derived Products)

In the latter case, forest management practices associated with cork extraction, such as shrub clearing, explain the juvenile appearance of the strawberry tree population, favouring shrubby growth forms from resprouts and hampering evolution to later development stages.

Helmut Lieth

Given the biophysical relevance of the criteria used to define seasonality and modality with respect to vegetation water requirements, this translates into potential risks for the growing season. Wisconsin Department of Natural Resources.

climateGraph function

Bimodal and multimodal single and dual wet seasons and multiple-wet-season regimes could be found in transition zones between unimodal single and dual wet seasons.

CSIRO PUBLISHING

Nur wenn der Niederschlagswert höher liegt als das Doppelte des Temperaturwertes, erhält das Gebiet durch den Regen pflanzenverfügbares Wasser für die natürliche und die Anbauflächen. We use a method to derive seasonality that includes temperature data in addition to rainfall data.

Ergänzende Betrachtungen zu der im Klimadiagramm

Growth and nitrogen accretion of di-nitrogen-fixing *Alnus glutinosa* L.

Helmut Lieth

The estimated mean annual temperature range is 1-18 C and mean annual rainfall range 400-1300 mm.

Recording at water bodies increases the efficiency of a survey of temperate bats with stationary, automated detectors

Identification: *Alnus glutinosa* is usually a medium-sized tree, with a pyramidal or narrowly oval, sparse crown, the base of which is low if the specimen grows in isolation, though in forests most individuals have straight stems with an umbrella-shaped crown.
