### Vision and mission

It was always hoped that nature would be able to re-colonise the wider landscape from these refuges when conditions were right Sands, 2012.

### Government's planning reforms must address the nature and climate crisis

It was mainly built on former agricultural land of low biodiversity value — the design of the development has made this site more biodiverse than it was before the development took place. Scotland is an important home for these birds, with populations on Handa reaching up to 50,000 in a typical summer.

### Red squirrels

Your support makes our work possible. Nature reserves have been vital in safeguarding wildlife but, as isolated fragments of wild places, they are not enough on their own Lawton, 2010; Hilty, 2006.

### Red squirrels

Green Infrastructure: Linking landscapes and communities. England Biodiversity Strategy: Climate Change Adaptation Principles.

### The Wildlife Trusts' marine review 2020

If the wider countryside is managed more sustainably, society and farmers will continue to benefit from the essential services provided by the natural environment, such as clean air and water, pollination Ricketts, 2008 , healthy soils Wall, 2012 , food and flood management.

### New project to put threatened SEQ gliders on the map

Alderney Wildlife Trust surveys grey seals as part of its vital conservation work to manage the special locations on the islands which form part of a

highly protected Ramsar site. Please join the CRO Press Club or put your business in the Sponsor Spotlight to support the coverage your care about.

### **Map Connects Wildlife Habitats, Corridors**

Targeted and co-ordinated grey squirrel control to keep densities of grey squirrel very low in carefully chosen areas is used to combat the spread of disease.

### **Wildlife Collections Reviews**

Out at sea, communities of slow-growing species such as sponges, sea-fans and sea-pens will be re-establishing themselves across much of the seabed; whales, dolphins and porpoises will be abundant and commercial fish stocks will have recovered. We believe that everyone deserves to live in a healthy, wildlife-rich natural world, and that everyone should have the opportunity to experience the joy of wildlife in their daily lives.

Taming the flood: Rivers, wetlands and the centuries old battle against flooding.
