

# Evaluation of A Radioisotopic X-Ray Drill-Hole Probe - Delineation of Lead Ores.

s.n - X

Description: -

-Evaluation of A Radioisotopic X-Ray Drill-Hole Probe - Delineation of Lead Ores.

-

Report of investigations (United States. Bureau of Mines) --  
7611 Evaluation of A Radioisotopic X-Ray Drill-Hole Probe -  
Delineation of Lead Ores.

Notes: 1

Chapter 3 Site Description Page 64 ii Kinetic tests on composite samples confirmed the hangingwall andesite was acid generating worst case scenario and acid neutralizing mean case scenario. Proceedings of the Illinois Mining Institute, 1981, p.

## Browse subject: Prospecting

The following mineralogical factors have been identified as important sample-specific factors influencing pyrite oxidation rates for both Eskay Creek and Mount Milligan: carbonate content, exposed pyrite surface area, pyrite trace element content, degree of pyrite crystallinity and pyrite trace element content. A holder of a Mineral Claim in good standing has the right to convert a Mineral Claim into a Mineral Lease. Rhyolite flow pyrite had a geometric mean of 8.
