## Patient Safety: Perianesthesia Nursing's Essential Role in Safe Practice

Cherry Hill, NJ: American Society of PeriAnesthesia Nurses; 2009.

## 2019 National Teaching Institute Evidence

The team created the following ETT repositioning schedule. Results Consensus process results included articulation of Standards, Competencies and Recommended Best Practices for Infant and Family Centered Developmental Care IFCDC , including components of systems thinking, positioning and touch, sleep and arousal, skin-to-skin contact, reduction of pain and stress for infants and families, and feeding. A patient with significant co-morbidities may have a higher preop acuity.

## Executive summary: standards, competencies, and recommended best practices for infant

The costs associated with high turnover rates are significant, particularly in hospitals and nursing homes Aiken and Cheung, 2008.

## Nursing Scope of Practice

Susan Russell, BSN, RN, JD, CPAN, CAPA ASPAN Director for Clinical Practice Q: Does ASPAN have standards or recommendations guiding the use of perioperative leg compression therapy for VTE prevention? However, changes resulting from the revision of it will both enhance

the scope of RN practice and increase opportunities for interprofessional collaboration via team leadership for all RNs in areas related to education, self-assessment, provision of care, and policy. On the other hand, given the projected nursing shortage, task shifting to overworked nurses could create unsafe patient care environments, especially in acute care hospitals.

### **Guidelines for Perioperative Care in Cardiac Surgery: Enhanced Recovery After Surgery Society Recommendations**

A recent retrospective review demonstrated that preadmission glycemic control, as assessed by hemoglobin A 1c, is associated with decreased long-term survival.

### **FAQs Old**

This Position Statement recognizes: The primary responsibility for Phase I PACU is to provide the optimal standard of care to the Postanesthesia patient and to effectively maintain the flow of the surgery schedule... Phase I PACUs are by their nature critical care units, and as such staff should meet the competencies required for the critically ill patient. This program was carried out over 6 months. These smaller cohorts were a result of not only the decrease in births, but also a decrease in interest in the profession during the 1980s and 1990s when women began entering other professions that had typically been dominated by men Staiger et al.
