What is the future of technology in education?

She is an accomplished practitioner in curriculum design and development, strategy formulation, digital strategy formulation, academic model formulation, educational technology, online and blended learning. The New York Times, p.

The Fourth Industrial Revolution and Higher Education

Pathways for students to reengage with their institutions after graduation will become imperative and will provide both updated skills to workers and a new channel for younger students and faculty to engage with the rapidly changing realities within the industrial and corporate sectors. We have to wait till the Minister comes up with a concrete response; however, I am afraid.

The Fourth Industrial Revolution and the Education System, how to respond?

One author has described the 4IR as a shift from non-renewable energy resources toward renewable energy enabled by biotechnology breakthroughs.

How Technology Is Changing Education

Educational Responses to the First Two Industrial Revolutions After the First Industrial Revolution, a vision for a new kind of curriculum began to form with more diverse degree options and new general education programs designed to produce breadth of study through the selection from a variety of elective courses. They must know the technology but be able to meet and solve all aspects of the challenges engendered by this technology.

4th Industrial Revolution requires a paradigm shift for education.

Once that point is reached where all labour has been equipped with the latest techniques and all wants of consumers have been met to the full extent, growth would come to an end unless technical progress occurs. Journal of Industrial Engineering and Management, 8 5 : 1512—1532. For

example, what responsibilities do private businesses have and how can they best collaborate with education systems to ensure appropriate training and skills development, and lower inequality? But, as explained above, technological change more generally results in higher productivity of resources.

INDUSTRY 4.0 AND ITS IMPACT ON EDUCATION

Perhaps it will be wearable devices such as Google Glass, although I suspect that tablets will still be used in education. Those are the years historians commonly use to bracket the Industrial Revolution.

OPUS at UTS: Technological Change: Implications for Theory and Praxis in Industrial Design / Design Engineering Education

So far, the study has involved observing and interviewing students and teachers at 20 schools. About two years ago, the IB and a team of educators decided that the time was ripe for significant change to this course — not only to update its content, but also to integrate the best practices for student inquiry, experiential learning and collaboration.
