Informed Consent and Shared Decision Making in Obstetrics and Gynecology

For more information, please see ACOG's other publications on these topics. As a component of childbirth preparation, a birth plan can be a medium to improve patient-provider communication regarding a desired labor and birth experience and improve satisfaction with care.

Risk assessment: Template and examples

Conclusions The information presented in this document represents basic infection prevention expectations for safe care in dental health care settings.

Risk assessment: Template and examples

For more information on the ethical complexities of informed consent for sterilization and fertility-restricting treatments, as well as the importance of cultural and racial awareness in the delivery of reproductive health care, please see separate publications on these topics from ACOG and others.

Information Assurance

Treatment with antibiotics to kill the infection will make it better, often in one or two days.

Information Assurance

If written consent has been part of this process, a copy of this document should be included in the records. Some women experience depression during or after pregnancy.

Risk management

Nonetheless, it is very likely some form of pro-labor legislation will be passed—even by the end of 2009, some commentators claim—making it easier for unions to organize. No part of this publication may be reproduced, stored in a retrieval system, posted on the internet, or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without prior written permission from the publisher. Instead, look to a combination of existing metrics, along with surveys or interviews that capture sentiment, for a more accurate picture.

Childbirth Education and Birth Plans

These protocols need to encompass the independent practitioners providing home birth service. Situations Unique to Obstetrics and Gynecology
The informed consent process may become more complicated during pregnancy because of the presence of the fetus and the obstetrician—gynecologist's dual concern for maternal and fetal well-being.

Informed Consent and Shared Decision Making in Obstetrics and Gynecology

Most of the increase in length of stay associated with higher BMI was related to increased rates of cesarean delivery and obesity-related high-risk conditions. London: Maternal and Child Health Research Consortium, 1998. If there is any doubt in a particular situation, consultation with local ethics and legal experts is encouraged.
