Regression Analysis Based on Stratified Samples on JSTOR

This knowledge base evolves continuously as a function of new research and expanded human experience.

Surveying mountain pine beetle damage of forests: A review of remote sensing opportunities

The risk rating model was based on model produced by Shore and Safranyik, with modified variable taken from Forest Inventory Planning databases.

APPLICATION OF THE KNOWLEDGE SYSTEM ENVIRONMENT FOR SUSTAINABLE FOREST LANDSCAPE MANAGEMENT PLANNING, PROBLEM SOLVING, AND DECISION SUPPORT

They concluded that counting egg niches caused a 36 percent overestimate in egg deposition.

Development and Comparison of Intensive and Extensive Sampling Methods and Preliminary Within

In Silvicultural guidelines for forest owners in Georgia.

Adaptive roadside sampling for bark beetle damage assessment

Sampling methods and population prediction models are needed to provide forest managers with the capability of monitoring and predicting populations of the insect. Using a two-step process effectively eliminates problems caused by zero-rich data because the zeros absence of dead trees are removed in the first step and therefore eliminated from further analysis. Field evaluation of the three methods for monitoring populations of house flies, *Musca domestica* Diptera: muscidae and other filth flies in the three types of poultry housing systems.
