A history of early geologic research in the Deep River Triassic Basin, North Carolina

Caudle N 2000 , , Endeavors. However, these are all too poor to warrant detailed description.

Flora of the Late Triassic

All of these are Late Carnian late Tuvanian in age and are associated with tetrapod skeletal taxa of the Conewagon land vertebrate faunachron Huber et al. Scherer CMS 1994 , Análise faciológica e bioestratigráfica do Triássico Superior topo da Formação Santa Maria na região de Candelária-RS. After getting permission from the landowner to return, I went to the site this past weekend to continue breaking out the soft rock.

Otischalkian strata of the Chile Group have produced very little footprint material Lucas and Huber, 1997 and the younger Chinle assemblages have nothing in common with the Pekin track faunule. II, 2nd English revised edition, translated and edited by Charles R.

These could be poorly preserved examples of new genus 1, however restudy and collection of new material is clearly needed. Dinosaur Tracks and Other Fossil Footprints of the Western United States. Both the Cow Branch Formation Dan River basin and the Cummock Formation Deep River basin, Sanford sub-basin contain potential source rocks for oil, but they are more likely to have yielded natural gas.

For this reason, a concerted effort should be made to collect more and better material from this key interval, especially from active quarries. Indeed, it is within only the last 45 years that the Triassic-age assemblages have been recognized as distinct in composition Baird, 1957; Olsen and Baird, 1986; Fraser and Olsen, 1996 with most of the occurrences still being known from superficial descriptions e. The book is loosely organized to present the physical aspects of Earth during the Late Triassic at the outset, followed by the paleontological aspects.

Late Triassic palynofloras of North America and their European correlatives

The absence of clear pads precludes a detailed osteological reconstruction of the pes of new genus 1.
