## Stemming in Metal Mines. Progress Report 5: Comparison of Dust and Gases Produced from Blasting Charges of Dynamite in Drill Holes, in Bombs, and in Mud

John Caskey of the University of Cincinnati was essentially a pure copper. Figure 1 Figure 2 To better understand the disproportionate burdens and impacts of nature destruction and deterioration across the country, CSP assembled information from dozens of datasets to create the most comprehensive picture to date of how human activities have modified natural areas in the conterminous United States. Cyprus cannot be discounted as one of the major sources of copper in antiquity; the distribution of Bronze Age archaeological sites along routes by which raw materials could reach the coast for shipment must be significant in terms of the economic life of the island Catling 1969 , and finds of slag and metal processing implements are explicit.

4

Analytical work should allow us to place them in the proper context and perhaps to extend the range of the eastern Mediterranean trade routes.

### Expedition Magazine

Branigan 1974 presents a large body of archaeological material drawn from Crete, but uses little scientific data and makes some misstatements about scientific aspects of metallurgy. The use of scientific analysis as an aid in understanding the distribution of these ingots was emphasized when Maddin and Muhly obtained a piece of one of the ingots from the Gelidonya shipwreck. Bun or plano-convex ingots may have been formed in the bottom of the furnace in which they were smelted, with destruction of the furnace necessary to remove the ingot.

. In addition, the ability to employ weldable structures promises similar cost reduction potential. Determination of the products of various copper sources by emission spectroscopy has not always been consonant with archaeological data, a common problem when scientists work without the collaboration of archaeologists and historians.

### 2 Incredible Project Progress Report Templates

Other 4-H groups might be meeting in more rural areas that do not have the best internet access. In some states where old mining areas are common, such as Colorado and Nevada, current mine owners, government agencies, or other interested parties may undertake reclamation and safety mitigation projects that address hazards at these sites. Cyprus, on the other hand, does have geologically verified and extensively exploited deposits of copper Bear 1963.
