The influence of women's changing roles and status in Bangladesh's fertility transition: Evidence from a study of credit programs and contraceptive use

To examine fertility differential change, this paper has used data from the Bangladesh Demographic and Health Survey BDHS 2014.

Bangladesh

Maternal mortality rates are falling, fertility rate is declining, and there is greater gender parity in school enrolment. What really encourages parents to opt for smaller families is lower infant and child mortality. Between 1985 and 1989, the decline in the mean number of children gain declined considerably between 1991 and 1993-1994 and 1999-2000 at all ages except 15-19.

Nutrition during pregnancy

If you use our datasets on your site or blog, we ask that you provide attribution via a link back to this page. It follows, therefore, that women who are not prepared, or not allowed to participate in domestic decision may be at a severe disadvantage in terms of reproductive decisions.

Women's Status and Fertility Rates

Discriminatory laws and policies hinder formal equality and socio-political conditions prevent women from exercising their rights. We conclude that the education level contributes most to fertility differential in Bangladesh.

Fertility differential of women in Bangladesh demographic and health survey 2014

Women are also discriminated against in family life. More educated women had children at the later ages. It is a great achievement that Bangladesh has lowered the TFR to 2.

Bangladesh Demographics 2020 (Population, Age, Sex, Trends)

In 1978, the Bangladeshi government started to promote family-planning services through family-welfare assistants, most of whom were professionally trained paramedics, nurses and birth attendants. If they expect their children to live, however, they want to invest in their education to maximise their chances in life. Health Condition: In the mid-1970s, a Bangladeshi woman had more than six children on average.

The influence of women's changing roles and status in Bangladesh's fertility transition: Evidence from a study of credit programs and contraceptive use

Their job was to reach out to village women at the grassroots level. Practically in the society and the implementation of law, women are still facing discrimination, exclusion and injustice and have negligible influence in decision making processes. Briefly, BDHS 2014 was a cross-sectional study designed to obtain information on key health indicators in Bangladesh i.
