## ASAP

If this cohort is endowed with high levels of human capital, the potential for a long working life with steadily increasing income can propel sustained and rapid economic growth. The evidence for this process, often termed 'biological drilling', has recently been reviewed 6. These changes occur over a 50 year period, thus the annual change is small.

## CAB Direct

In ARMM, the poorest region, agriculture accounts for over two-thirds of employment. In fact in the case of poultry, per capita consumption will actually increase, contrary to the business-as-usual projection. In Lesotho, despite the late onset of rains, a recovery in maize production to near-average levels is expected.

## Food Security and Nutrition in the Philippines, Strategic Review

The swarms have reached North and Central Kenya in late December, where so far, damage on exceptionally green rangelands is contained. However, while South Africa is expecting bumper crop production, significant rainfall deficits are hampering vegetation conditions in crop and pastoral areas of southern Angola and southern and central Madagascar, pastoral areas of north-western Namibia, and northern Mozambique. The largest increases, averaging 37.

## ASAP

In Indonesia, the season is coming to a close for wet season rice, with good prospects, and the planting of dry season rice has begun in some areas. Food security concerns remain for minor producing areas in southern Mozambique, that were affected by drought throughout the season. The effect of heavy rains in El Salvador is less severe, and although localised crop loss has been reported, national production is anticipated at an above-average level.

## The Regional Institute

### **Food Security and Nutrition in the Philippines, Strategic Review**

Climate Impacts The Philippines is among the most vulnerable to climate change impacts. Variations of this main theme evolved in the subsequent Philippine Nutrition Programs. North Africa: The region is generally out of season.

#### **ASAP**

Members are engaged in hog raising, corn farming, and related agricultural activities. Good pastoral conditions throughout the season are expected to support livestock production in most countries, except for north-western parts of Namibia mainly Kunene and southern Angola. Since 2006, Harbest and SM Foundation have trained 13,000 farmers all over the country.

#### **CAB Direct**

In Bangladesh, the harvest of irrigated dry season Boro rice has finished with good expectations and planting of Aman rice has started under favourable conditions.
