By critically balancing the structure of these materials, melt processible products that are relatively good barriers with reduced moisture sensitivity can be achieved. To select or design a polymeric material with desirable flammability properties, a familiarity with the principles of combustion, the relationship of flammability to polymer structure, and the modes of flame inhibition is POLYMER PRODUCTS AND THEIR USES The plastic industry of the 1980s is in a different situation than it was in 1973. The Art History faculty offers an extensive range of specialties, theoretical approaches, and methodologies.
