The non-regenerative application is the most frequent and involves two separate fluids.

Handbook of Heat Transfer

The sun and earth both radiate heat toward each other.

Heat Exchangers

Hartnett, editor ; Young I. The second is to reduce the temperature of the water entering the purification system prior to reaching the non-regenerative heat exchanger, allowing use of a smaller heat exchanger to achieve the desired temperature for purification. Since the thickness of a condenser tube wall is so small and the cross-sectional area for heat transfer is relatively constant, we can use to calculate U_o .

Heat Exchangers

Thermal Radiation Radiant heat transfer involves the transfer of heat by electromagnetic radiation that arises due to the temperature of a body. They transfer heat by convection and by conduction through the wall. The authors grant you the right to download and print it for your personal use or for non-profit instructional use.

Radiant Heat Transfer

To take into account the fact that real objects are gray bodies, Equation 2-12 is modified to be of the following form.

Heat Exchangers

Example: A liquid-to-liquid counterflow heat exchanger is used as part of an auxiliary system at a nuclear facility. Log Mean Temperature Difference Application To Heat Exchangers In order to solve certain heat exchanger problems, a LMTD or ΔT_{lm} must be evaluated before the heat removal from the heat exchanger is determined.
