Animal parasitic diseases

The importance of cathepsin L activity for development of filarial nematodes was also indicated by RNAi of Bm-cpl-1 and Bm-cpl-5, members of a cathepsin L gene family in B.

Parasitic Diseases of Cattle

The first and as of 2015 the only licensed vaccine for any parasitic disease of humans is for malaria. Record general location, size, identification, and other observations as outlined below. A few years later, in 1687, the Italian biologists and described as caused by the parasitic mite , marking it as the first disease of humans with a known microscopic causative agent.
