The world's 20 most incredible insects

The borders of their wings have a dark brown color. All it proves is the dung beetle can roll in a straight line for some unknown reason.

10 Insects with Amazing Superpowers

Even though it is pretty, it is not as impressive as a caterpillar.

Amazing Insects

Fireflies use their ability to produce light to signal each other that they are available for mating. Because it mainly feeds on plant-eating insects. There would be fewer, less pollution, less expenses, etc.

Amazing Insects Archives

The shiny blue colored body is what makes them so attractive.

Amazing Insects Archives

This rainforest butterfly has vivid crimson patches on its upper wings, but its underwings are arguably even more spectacular. Swarming grasshoppers Swarm behaviour is usually associated with locusts, but in 2014, New Mexico saw a huge swarm of grasshoppers so dense it even showed up on radar! Some of these techniques are pure offense, but most of them have evolved into remarkable defenses. This particular species is fairly common in northern New Guinea, where it inhabits both primary forests and local gardens.

Amazing Insects of the World

These giant cockroaches like to burrow about one metre into the ground. These small insects have an attractive long snout. Their eyes are red and have short, little antennas.

10 Amazing Insect Defensive Tactics

Some insects don't have fancy weaponry or acting chops and have to rely on speed to get away. You'll find these guys in Guatemala, Mexico and parts of the southern United States. They live in tropical habitats around the world.

The world's 20 most incredible insects

Moreover, just like bees, fireflies can talk with each other too. They play a significant role in pollinating more than 700 species of orchids in the tropical region.
