In this second edition, I have attempted to expand the treatment of many of the techniques discussed, as well as include important topics such as the Metropolis algorithm and methods for assessing the convergence of a Markov chain algorithm.

A unified introduction to a variety of computational algorithms for likelihood and Bayesian inference. File Name: Tools For Statistical Inference Methods For The Exploration Of Posterior Distributions And Likelihood Functions Springer Series In Statistics Hash File: f5dcd7a4850231d8ded54b4550fd17532.

## Introduction to Monte Carlo Methods

Bayesian methods are experiencing increased use for probabilistic ecological modelling. Course Objectives: We will introduce statistical distributions and computing the statistical power of various designs, matrix algebra useful for statistics and the general linear model, maximum likelihood estimation and testing, Bayesian Statistics, and various resampling and randomization methods.
