Osteoporosis

Because of these demands, your bones are constantly remodeling themselves. The more cost-effective drugs often carry greater side effects and a more difficult dosing regimen. The balance between the activities of these two cell types governs whether bone is made, maintained, or lost.

Learn What Osteoporosis Is and What It's Caused by

So, we really have an opportunity to really change that dynamic and shift the balance from bone breakdown to bone build up, right? The most important ones are calcium and.

Osteoporosis

And this is a test I love to do with patients. If you have missed any part of this discussion, and to find others in the series, visit ReachMD. The drug is given in two injections under the skin in the same sitting once a month for 12 months or less.

Awareness, adherence key to improved osteoporosis care

As a result, your body can steal calcium from bone for a variety of important metabolic functions. J Clin Endocrinol Metab, 2005.

Pathophysiology

Get free access to Dr. We have a website, , which provides information for health professionals and patients alike, educational resources and a networking opportunity for members and certification registry is also up there.
