Czerwinski has assembled a list of articles that covers ocular surface disease in a wide range of animals, including: Rabbits; Rodents Guinea pigs, mice, rats, and chinchillas ; Ferrets; Marine mammals; Birds; New world camelids; Fish; Amphibians; and Reptiles crocodilians, lizards, chelonians, and snakes. That number is not excessive for a fully employed veterinary pathologist, because it on average amounts only to about 7 autopsies per day, assuming 250 working days per year, and taking into account that many of the autopsies involved small animals and were routine. Growing up on a farm led him to decide already early in his life to become a veterinarian and nutritionist.
