The effect is seen to be synergistic, but due to the restriction on storage capacity at most production plants, this combination is rarely used. At lower temperatures, the reaction to struvite, MgKPO 4·6H 2O, is incomplete and the resulting reaction products are amorphous hydrated phosphate phase s which are less dense and not durable. However, these theoretical Particle Size Distributions PSD were not possible in practice without aggregates or more correctly fillers having particle sizes of 0.
