Sound theory is highlighted by rich and current practical examples. We could select 4 cars at random 1,2,3,4 to test four tire brands A,B,C,D 1: A, B, C, D 2: A, B, C, D 3: A, B, C, D 4: A, B, C, D This provides a data pool for evaluating tire performance for a make of car.

He has more than 100 refereed conference and journal papers, and is co-author of a leading textbook in instrumentation and measurements. The variation of the independent variables should be performed separately maintaining one independent variable fixed while the other is systematically varied over the test range. New and revised examples and problems clearly show how the information is applied in the field.
