## Nature and Scope

Brand-new social institutions also arose: the Jesuit order, the Spanish infantry, the first modern navy, and, finally, the sovereign national state. Those living in towns of more than 5,000 rose from just over 13% to about 21% of the national population and those living in rural nonagricultural areas rose from about 26 to about 33% over the same period. A major study carried out by the University of London found evidence for least 2,400 markets in English towns by 1516.

## The Coaches: 'Travellers in Eighteenth

Something similar happened in the sixteenth-century university, a hundred years after the invention of the printing press and movable type. However, gradually retail shops introduced innovations that would allow them to separate wealthier customers from the lower classes and peasants. In an era in which fit was paramount, his was impeccable.

## 18th

Any potential that there might have been for renewed growth was choked off by two further factors. They change consumer behavior, savings patterns, industry structure—in short, the entire economy. But the impact may be even greater on societies and politics and, above all, on the way we see the world and ourselves in it.

## Traditional British Fish and Chips Recipe

But a great deal of the raw materials used were being produced at home.

## London History

Whatever respect and attention they may have paid the passengers, the armed guard of the mail-coach could be a terror on the roads. Newbery received a modest education in his home district, learning only the basics traditionally thought necessary for a farmer. Moore and Reid, for

example, have argued that the distinctive shapes and markings in ancient containers should be termed proto-brands rather than modern brands.

### **John Singleton Copley, Watson and the Shark**

These provided room for people to set up stalls and booths on market days.

### **Food and drink in 17th and 18th century inns and alehouses — History is Now Magazine, Podcasts, Blog and Books**

To the East, the port grew in ever greater importance; attracting more and more ships, requiring ever more labour. The coal industry bred other innovations. And it is nearly certain that few of them—and few industries based on them—will come out of computer and information technology.
