## This Band

It is beyond the scope of this program to determine potential epitopes for binding, however servers and programs exist to predict these. Boland, who has seen all three of her children grow up and go off to college during her cancer fight, welcomes the progress.

## Antibody Design and Conjugation

One such transformation is a process called phosphorylation, when a compound called phosphate is added to an amino acid, changing its shape and charge. Used for sequence and structure sampling within CDR clusters. Currently, the fallback strategy is used if the primary strategy does not meet statistical requirements.

## Designing Antibodies

Etc Option Description L1 SeqDesign DISALLOWED Disable specific amino acid sampling for this CDR One or Three letter codes.

## Antibody Design, Publicly Challenged

Longer incubation times can be combined with lower temperatures to promote specific binding.
