Early Cenomanian cephalopods from the Grayson Formation of north

Though we are experiencing some service cost pressures in the play, there is no doubt that the shift to a higher liquids and the economic robustness of the Eagle Ford inventory adds margin to our profitability and impact to our future growth. The initial average production rates for these wells are included in the following table: The Company is currently drilling three operated horizontal wells in McMullen County, with two wells targeting the Eagle Ford shale and one well targeting the Olmos tight sand Olmos Formation. THERE MIGHT BE DELAY THAN THE ESTIMATED DELIVERY DATE DUE TO COVID-19.

Localities — The only locality at which the Pepper Shale can be readily observed in Austin is in the drainage ditch at the east side of the Missouri Pacific Railroad track on Barton Springs Road — Bouldin Creek — Missouri Pacific drainage canal Cloice Shale Member Localities — The Cloice is a dark gray shale that can be distinguished from the Pepper Shale because the Pepper Shale has an unctuous or soapy feel whereas the Cloice Shale is gritty to the touch. In less than one year, Rosetta has taken the Gates Ranch area from concept to the largest producing area in our portfolio. After frac, this well produced an initial rate of 381 barrels of oil per day and is currently producing to sales on a restricted choke and is on a very shallow production decline.
