## An Introduction to Chemistry

An unexpected color change or release of odor also often indicates a chemical change. Nowadays, botanists in the strict sense study approximately 410,000 of which some 391,000 species are including approximately 369,000 species of, and approximately 20,000 are.

## Structure of Matter

Highsmith, courtesy of Gates Frontiers Fund Wyoming Collection within the Carol M. Their size makes it impossible to weigh molecules in relatively small quantities; hence the mole facilitates comparisons of mass between substances. Most the mass was packed into the nucleus that was abnormally small compared to the actual size of the atom.

## Chemistry Lesson Plans

This is one of the reasons why astronauts have to wear pressurized suits: if they did not, their blood would boil—even though space itself is incredibly cold. Material objects are composed of atoms and molecules of these elements and compounds, thus providing different materials with different electrical properties.
