Careers in Food Science: From Undergraduate to Professional

You will find agronomists teaching, conducting business, and doing research in all parts of the food industry all around the world. To be an ecologist, you should be an intensely curious person who appreciates plants, animals, and the environment.

Career Descriptions / Preparing for Careers in Agriculture / Education / Home

To be an environmental scientist, you need a bachelor's degree. It helps to get experience with leadership skills, natural resources, and public speaking through organizations like 4-H, FFA or scouting.

Careers in Food Science: From Undergraduate to Professional

Foresters may manage timberlands for private industry or may scout out and buy timber from other landowners for their companies. You can major in soil science, water resources, or meteorology. Government, industries, and museums usually hire ecologists with doctoral degrees.

Food Science and Nutrition

Examples include: solid and hazardous waste management, development of environmental impact statements, water chemistry and analysis, pollution ecology, hydrogeology, and advanced techniques in environmental analysis. Some work in government or educational institutions. Rantz, American Journal of Enology and Viticulture Weed Scientist Weed scientists conduct research and develop products in public and private laboratories, greenhouses, and field locations.

Food and Nutrition Science

Since most wildlife resources and conservation problems relate to people, you need courses in English, psychology, history, geography, statistics and economics, as well as in physical and biological sciences. You will take courses such as biology, business, chemistry, engineering, management, mathematics, microbiology, physics, and statistics, as well as classes in food science. Managers conduct sales interviews to secure

wedding, commercial, and special events accounts.

Careers in Food Science: From Undergraduate to Professional

To be successful as a food process engineer, you must like math and science, especially chemistry and biology. Horticulturists can work in industry, government, or educational institutions. Universities hire biometrists to support biological researchers or as faculty to teach and do research on applied problems.

Undergraduate Program

Some write for magazines that cover medicine, the environment, natural science, academics, or business.
