Molecular Parasitology

Should the ongoing pandemic escalate, resulting in Government measures preventing us from delivering on campus teaching, students on lab-based programmes may be required to suspend their studies until such time that access to laboratories can be reinstated. In the battle between protozoans and helminths, the worms win when it comes to ugly, and what is a parasitology text without unappetizing photos? Using state-of-the-art imaging techniques, we are also investigating how parasites, such as *Toxoplasma gondii*, can evade and manipulate host immune responses for their own benefit.

Division of Clinical Microbiology

Our Parasitology program also includes vector biology and pathogenesis of vector borne pathogens. The below structure outlines the proposed modules for this programme.

We are committed to courtesy and excellence in service delivery The Departments core functions: Teaching and Examination of Pathology to students in the College of Health Sciences. Many have shaped policy and practice leading to improved treatment of worm infections with wide-scale application for informing government agencies across Australia and the world, on intervention options in other parasite-endemic communities. Both dogs and cats are intermediate host of *A. scaris lumbricoides*.

Please note: due to the unpredictable nature of the pandemic, we are not currently in a position to guarantee that overseas or field based projects will be possible or that London based laboratories will be accessible. Application deadlines All applicants are encouraged to apply as early as possible to ensure availability of a place and a timely decision on their application.

Department of Medical Microbiology and Parasitology

A large part of our research into parasite genomes is aimed at antigenic discovery, for example, of novel cell-surface invasion proteins in the malaria parasite; knowledge that will increase our appreciation of host-pathogen interactions, while facilitating vaccine design.

MSc Medical Parasitology

This book will be a valuable addition to the bookshelves of persons interested in molecular parasitology.

Multiple Choice Questions (MCQ): Microbiology: Parasitology

Module specifications provide full details about the aims and objectives of each module, what you will study and how the module is assessed.
